

Sai Sirisha Volety

Boston | (857)313-9142 | saisirisha1299@gmail.com | LinkedIn | GitHub

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, C#, C++, JavaScript

Backend and APIs: Spring Boot, Node.js, ASP.NET MVC, RESTful APIs, Authentication/Authorization, Microservices

Databases: PostgreSQL, MySQL, Oracle, MongoDB, Aerospike

Cloud and Infra: AWS (S3, EC2, RDS, Lambda), GCP, Docker, Kubernetes, CI/CD Workflows, Git

Frontend: React, Angular, Next.js, Redux, HTML, CSS

Testing and Tools: JUnit, Postman, Unit Testing, Integration Testing

WORK EXPERIENCE

Software Engineer Intern | Fidelity Investments

Jul 2025 - Jan 2026

- Engineered scalable Java Spring Boot **microservices** and RESTful APIs supporting high-volume financial analytics workflows, **cloud-native distributed systems**, and **AI-enabled platform integrations**.
- Architected and implemented a **database-agnostic API layer** compatible with **Aerospike, PostgreSQL, and Oracle**, optimizing data retrieval efficiency and system scalability across enterprise applications.
- Modernized internal web applications using **Angular 18 and Backend-for-Frontend (BFF) architecture**, reducing redundant API calls by 30% and improving frontend responsiveness by 20%.
- Designed secure authentication, authorization, session management, caching, and **role-based access workflows** supporting 500+ enterprise users across distributed systems.
- Revamped the Portfolio Market Risk Impact platform with extensible APIs and modular integration layers enabling **AI-driven chatbot and voice-assistant workflows** for intelligent portfolio construction.
- Collaborated with engineers and product stakeholders through **design discussions, code reviews, testing, debugging**, and release activities to deliver maintainable production-ready features.

Software Engineer, Full Stack | ICICI Lombard

Feb 2021 - Nov 2023

- Led end-to-end development of scalable **full-stack** enterprise applications using Java, ASP.NET MVC, JavaScript, and Oracle SQL, improving customer-facing policy issuance workflows and **reducing booking time by 25%**.
- Engineered RESTful APIs and integrated third-party payment gateways, improving **transaction reliability** and ensuring **data consistency** across distributed systems.
- Developed **authentication, authorization, token handling, API validation**, and reusable backend services enabling secure communication between frontend applications and financial systems.
- Redesigned and optimized Oracle SQL database workflows through **indexing and query optimization, improving query performance** and supporting increased transaction volumes.
- Deployed and supported production services on AWS (EC2, RDS, S3), **optimizing** infrastructure scalability, availability, and deployment efficiency for enterprise policy systems.
- Supported **production systems** by debugging incidents, improving backend reliability, optimizing performance, and contributing to CI/CD workflows, code reviews, and Agile delivery.

PROJECTS

Kanbas Web App | *React, Node.js, Next.js*

Sep 2024 - Dec 2024

- Developed a **responsive full-stack** Learning Management System using React, Node.js, and RESTful APIs with role-based access control and scalable frontend-backend integration.
- Built **reusable UI components** and dynamic client-side workflows to improve usability and maintainability.

Stock Portfolio Simulator | *Java, Java Swing*

Jan 2024 - Apr 2024

- Built a Java-based Stock Portfolio Simulator applying **object-oriented design and SOLID principles** to model investment workflows and improve application maintainability.
- Developed modular application components and implemented **JUnit-based unit testing** to improve code reliability, test coverage, and long-term maintainability.

EDUCATION

Northeastern University, Boston

Jan 2024 – Apr 2026

Master of Science in Computer Science | CGPA: 3.91/4.0

Courses: Programming Design, Algorithms, DBMS (Teaching Assistant), AI, Cloud Computing, Web development

Manipal Institute of Technology, India

Jul 2017 – Aug 2021

Bachelor of Technology in Electronics and Communication Engineering | CGPA: 3.6/4.0

Courses: Linux and Shell Scripting, Computer Networks, Data Structures, Computer Organization Architecture
